

# Archisman Panigrahi

Graduate Student · Physics

Massachusetts Institute of Technology, MA, USA

☎ +1 (857) 706-9484 | ✉ [archi137@mit.edu](mailto:archi137@mit.edu)

## Education

### Ph.D. in Physics

MASSACHUSETTS INSTITUTE OF TECHNOLOGY

Cambridge, MA, USA

August 2022 - Ongoing

### Master of Science in Physics

INDIAN INSTITUTE OF SCIENCE

- C.G.P.A - 9.8/10

Bangalore, India

Aug. 2021 - Jun. 2022

### Bachelor of Science (Research) in Physics

INDIAN INSTITUTE OF SCIENCE

- C.G.P.A - 9.8/10

Bangalore, India

Aug. 2017 - Jun. 2021

### Higher Secondary Examination ( $XII^{\text{th}}$ standard)

HOOGHLY COLLEGIATE SCHOOL

- Obtained 1<sup>st</sup> rank in Board, among about 0.7 million candidates

West Bengal Council of Higher  
Secondary Education, India

2015 - 2017

### Secondary Examination ( $X^{\text{th}}$ standard)

HOOGHLY COLLEGIATE SCHOOL

- Obtained 2<sup>nd</sup> rank in Board, among about 1 million candidates

West Bengal Board of Secondary  
Education, India

2005 - 2015

## Achievements

- |         |   |                    |
|---------|---|--------------------|
| 2022    | <b>1st Rank in India</b> in CSIR-NET (JRF) in Physics   | India              |
| 2022    | <b>1st Rank in India</b> in Graduate Aptitude Test in Engineering (G.A.T.E.) in Physics                                       | India              |
| 2017-22 | <b>C.G.P.A 9.8/10</b> in B.S. (Research) and M.S., highest GPA in batch   | IISc, Bangalore    |
| 2017    | <b>1st rank (99.2 %) in Board</b> in Higher Secondary Examination   | West Bengal, India |
| 2017    | 10th rank in National Entrance Screening Test (NEST)  | India              |
| 2017    | Qualified for JEE Mains (All India Rank - 381) - an all India Engineering entrance  |                    |
| 2017    | Qualified for JEE Advanced examination (All India Rank- 543), Entrance examination of Indian Institute(s) of Technology (IIT) |                    |
| 2017    | Qualified for Indian Statistical Institute, Kolkata and Chennai Mathematical Institute  |                    |
| 2015    | Qualified for K.V.P.Y. (All India Rank - 128)   |                    |
| 2015    | <b>2nd rank (97.57 %) in Board</b> in Secondary Examination   | West Bengal, India |

## Research Articles

- **A. Panigrahi**, S. Mukerjee; *Energy magnetization and transport in systems with a non-zero Berry curvature in a magnetic field* SciPost Phys. Core 6, 052 (2023)
- **A. Panigrahi**, V. Juričić, B. Roy; *Projected Topological Branes* Commun Phys 5, 230 (2022)
- **A. Panigrahi**, R. Moessner, B. Roy; *Non-Hermitian dislocation modes: Stability and melting across exceptional points* PRB 106, L041302 (2022)

## Talks

### Topological phases in quasicrystals: A general principle of construction

CLICK [HERE](#) TO DOWNLOAD THE PRESENTATION

APS March Meeting (virtually)

March 2022

## Research Interests

### Broadly interested in theoretical Condensed Matter Physics

- Topological phases of matter and Quantum Phase transitions
- Thermo-electric transport and the effects of Berry curvature
- Brownian motion
- Thermalization of quantum systems and Many body localization

## Skills

**Mathematical skills** Integral Calculus, Linear Algebra, Trigonometry, Differential Equations

Comfortable with performing long algebraic calculations in pen and paper

**Programming skills** Julia, MATLAB/Octave, Mathematica, Python

**Advanced Physics Courses** Condensed Matter Physics II, Advanced Statistical Physics, Quantum Field Theory I, General Relativity

**Languages** Fluent in English, Bengali, Hindi

## Research Experience

### Many Body Localization (MBL) and thermalization of interacting quantum spin chain

IISc, Bangalore, India  
(Master's thesis)

WITH PROF. SUBROTO MUKERJEE

September 2021 - April 2022

- Studied how the Out-of-Time Ordered Correlator (OTOC) behaves for MBL and thermal systems
- Studied behavior of OTOC in MBL systems with random and incommensurate potential, with and without interaction

### Topological phases in projected lower dimensional branes

MPIPKS, Dresden, Germany  
(remotely)

JOINTLY WITH PROF. BITAN ROY AND PROF. VLADIMIR JURIČIĆ

June 2021 - September 2021

- Numerically studied how topological properties of parent systems emerge in projected crystals and Fibonacci quasicrystals
- Verified the existence of dislocation modes, Weyl points, and Landau levels in projected crystals and quasicrystals
- Proposed how this method can be utilized to study higher dimensional (>3D) topological phases within 3D systems

### Berry curvature effects on thermoelectric transport

IISc, Bangalore, India  
(Bachelor's thesis)

WITH PROF. SUBROTO MUKERJEE

October 2020 - June 2021

- Studied how Berry curvature can alter thermoelectric transport, leading to anomalous Hall and anomalous Nernst effects
- Studied the Boltzmann transport formalism
- Studied how the Onsager relation can be demonstrated from microscopic theories for a system with a non-trivial Berry curvature
- Found a condition on the energy magnetization such that the Einstein relation holds for the transport energy current in these systems
- Showcased a physical interpretation of this condition, and obtained a closed expression for energy magnetization
- Analytically solved the Boltzmann transport equation (including Berry curvature effects) for two-dimensional systems

### Non-Hermitian Topological Insulators and Dislocations

MPIPKS, Dresden, Germany  
(remotely)

WITH PROF. BITAN ROY

May 2020 - September 2020

- Studied and numerically implemented SSH Model, Chern Insulators, Quantum Spin Hall Insulators
- Studied the effects of dislocation in Hermitian and Non-Hermitian Chern Insulators
- Obtained phase diagrams for regimes where topological states get pinned at dislocation centers
- Proposed how dislocations can be used to probe topological phases in non-Hermitian systems, where the non-Hermitian skin effect masks the traditional bulk-boundary correspondence

### Nano Heat Engines beyond the Carnot Efficiency

IISc, Bangalore, India  
May 2019 - July 2019

WITH PROF. H. R. KRISHNAMURTHY

- Studied how harmonic oscillators and two state systems can be used as efficient heat engines
- Read articles claiming Carnot efficiency can be surpassed with "squeezed" thermal baths
- Figured out the sense in which Carnot efficiency is surpassed without violating 2<sup>nd</sup> law of thermodynamics
- Studied about Brownian Motion and Langevin equation
- Solved the Langevin equation for a special kind of stochastic force, for which a classical harmonic oscillator behaves like a squeezed state
- Created a computer simulation to verify the nature of this solution
